

# 10000 to 1

(tasks per second)

Ben Clifford  
[benc@hawaga.org.uk](mailto:benc@hawaga.org.uk)

# Baseline A: my laptop, local threads without logging

10188

tasks/sec

# Baseline B: NERSC Perlmutter with Work Queue

0.63  
tasks/sec

# Variant L: my laptop, local threads, default logging on

Parallel for loop config: parallel/tests/configs/local\_threads.py  
Benchmarking graph: 2019-08-08 14:11:22.093 tasks/second

~~10188~~

4000

tasks/sec

## Variant R: perlmutter Work Queue, 1 core per task

```
$ parsl-perf --resources '{"cores":1,  
"memory":0, "disk":0}' ...
```

(2.8x speedup on a host with 256 cores...)

~~0.62~~

1.68

tasks/sec

# Variant C: Work Queue coprocesses

Persistent Python workers

== Task Vine "serverless" mode

~~1.68~~

400

tasks/sec

# Variant M: Monitoring

~~400~~

300

tasks/sec

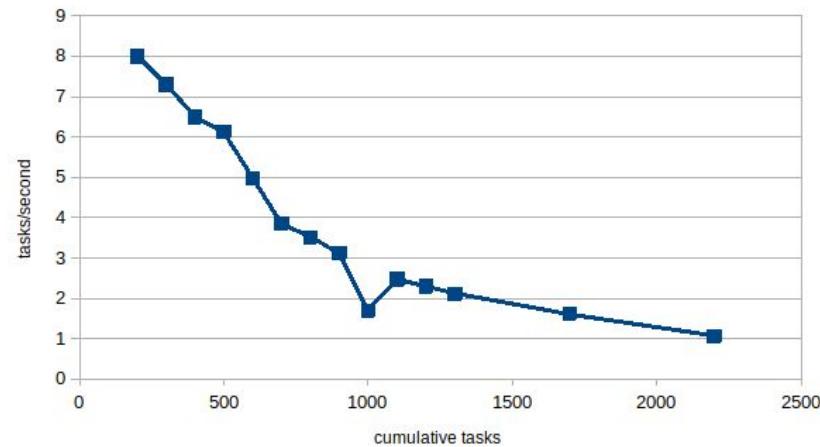

serialization  
process forking  
network message delivery

in-task resource monitoring

11

tasks/sec

# Variant S: my serialization mess up

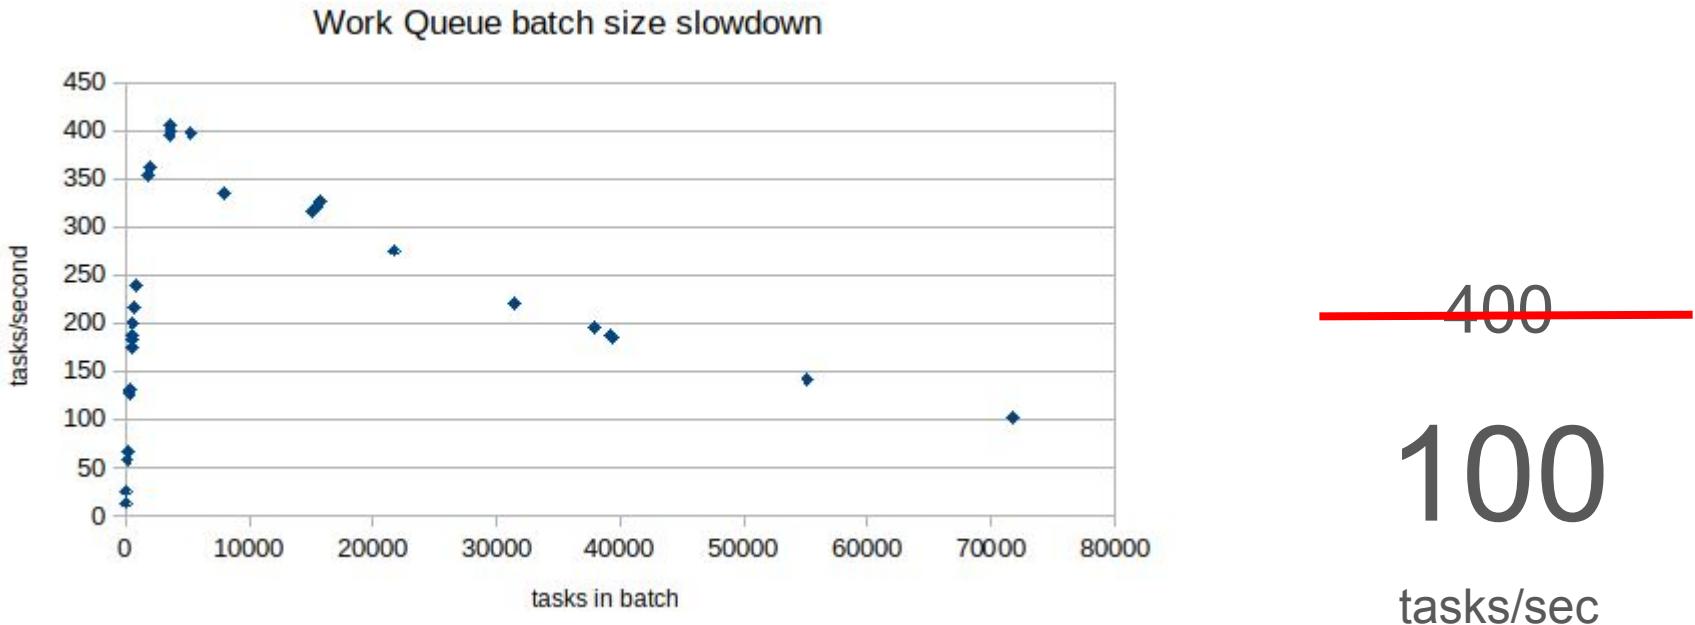

11

1

tasks/sec

# Variant Q: Work Queue queue length slow down

tasks/sec
